CSSA Workshop

Nicole Granucci

May 31st 2014
Learning Outcomes

Educators will

• 1) Learn modeling strategies that are easy to use, student friendly, and align with National Standards
• 2) Understand the relevance of scientific models in the scientific community
• 3) Develop skills in real world data extraction
• 4) Learn how use graphical models to develop conclusions
• 5) Discover new uses for data science in the classroom
• 6) Apply modeling strategies to develop scientific conclusions
Workshop Outcomes

• NGSS – Models and Common Core Alignment
• Recognize examples of models to use in the classroom in conjunction with NGSS
• Explain how astronomers use models to make predictions
• Extract astronomical data sets for classroom use
• Generate multiple plots for data analysis
• Learn how to use mathematical models in laboratory settings
Learning Outcomes

• Learn how to engage students in real world data explorations

• Find new ways to included data science concepts and strategies in CS courses including mobile technology

• Develop skills in data science that are applicable to the classroom

• Discover readily available, easy to use, student friendly, yet powerful data tools
Agenda

• NGSS Practices/Common Core
• NASA/IPAC Teacher Archive Research Program – NITARP
• “Kit I” – Using HR Models to determine stellar characteristics
• “Kit II” – Using the Ohm’s Law model to determine characteristics of electronic devices
• Conclusion
Activity

• Draw a model of the solar system
What is a Model?

“...a system of objects, symbols, and relationships representing another system in a different medium”

*Models-Based Science Teaching NSTA Press – Steven W. Gilbert*

A method for displaying information to show understanding
Developing and using models

• Based on Evidence
• Represent a system/process through
• Evaluate & Refine Models
  – Models are simplified
  – Inaccuracies
### Examples of Models in Several Categories

<table>
<thead>
<tr>
<th>Class of Models</th>

Model Examples - Diagrams
Model Examples - Diagrams

• **Magnetic Field** – a region of space around the magnet that generates an interaction between other magnets
Model Examples - Mathematical

• Ohm’s Law

\[ I = \frac{V}{R} \]

- Current in a Circuit (A)
- Voltage in Circuit (V)
- Total Resistance of the circuit (Ω)
Model Examples - Graphical

- Graphical Representation of Ohm’s Law

The relationship between voltage and current for some components:
- (a) an ohmic resistor,
- (b) a non-ohmic light bulb,
- (c) a diode,
- (d) a thermistor

\[ V = I \cdot R \]
\[ y = mx \]

\[ V = y \quad I = x \]
\[ m = R \]

Slope of Graph = R
Model Examples - Analogies

Comparing a DC Circuit to the Flow of Water

Choose Voltage/Pressure: Low, High

Model Examples – Concept Maps

Figure 1: Concept Map Of Concept Maps
Model Examples - Simulations

• PHET Simulators

YOUR FAVORITE COFFEE: “THE GREEN WAY”

OUT OF 111 PEOPLE SURVEYED, ONLY 15% RECYCLE THEIR K-CUPS.

In 2011 about 5 billion k-cups were sold.

Source: Chegg.com http://www.chegg.com/gp/1411

USED K-CUP COMPOSITION

The garbage from these k-cups is a large environmental issue due the amount of waste.

How to Recycle K-Cups

HINTS AND TIPS

- GUT IF FEED
- RECYCLE K-CUP END
- TAKE OUT FILTER
- COMPOST THE FILLING
- BURY OUT FILMING
- THROW AWAY FILTER IN THE TRASH

Elements in the body, by mass

- O: 1%  9.5%
- C: 1.5%
- H: 0.2%  18.5%
- Ca: 0.2%
- Na: 0.3%
- K: 0.4%
- Mg: 0.4%
- S: 65%
How do Models help student understanding?

• Promote Higher order **thinking**
  – Analyze
  – Synthesize
  – Evaluate

• **Communicates** science through a visual for understanding
NGSS Practices

1. Asking questions (for science) and defining problems (for engineering)
2. Developing and using models
3. Planning and carrying out investigations
4. Analyzing and interpreting data
5. Using mathematics and computational thinking
6. Constructing explanations (for science) and designing solutions (for engineering)
7. Engaging in argument from evidence
8. Obtaining, evaluating, and communicating information

http://www.nextgenscience.org/
High School - Linear Modeling

• **CCSS.Math.Content.HSF-LE.A.2** Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).

• **CCSS.Math.Content.HSS-ID.C.8** Compute (using technology) and interpret the correlation coefficient of a linear fit.

• **CCSS.Math.Content.HSF-LE.B.5** Interpret the parameters in a linear or exponential function in terms of a context.

• **CCSS.Math.Content.HSS-ID.A.3** Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).
High School - Developing a Model & Writing

- **CCSS.ELA-LITERACY.W.9-10.7**
  Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.

- **CCSS.ELA-LITERACY.W.9-10.8**
  Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the usefulness of each source in answering the research question; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and following a standard format for citation.

- **CCSS.ELA-LITERACY.W.9-10.9**
  Draw evidence from literary or informational texts to support analysis, reflection, and research.
## Practice 2 Developing and Using Models

Modeling in 9–12 builds on K–8 experiences and progresses to using, synthesizing, and developing models to predict and show relationships among variables between systems and their components in the natural and designed worlds.

- Evaluate merits and limitations of two different models of the same proposed tool, process, mechanism or system in order to select or revise a model that best fits the evidence or design criteria.
- Design a test of a model to ascertain its reliability.
- Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.
- Develop and/or use multiple types of models to provide mechanistic accounts and/or predict phenomena, and move flexibly between model types based on merits and limitations.
- Develop a complex model that allows for manipulation and testing of a proposed process or system.
- Develop and/or use a model (including mathematical and computational) to generate data to support explanations, predict phenomena, analyze systems, and/or solve problems.

## CC WLS - 7, 8, 9

7. Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.

8. Gather relevant information from multiple authoritative print and digital resources, using advanced searches effectively; access the strengths and limitations of each source in terms of the specific task, purpose, and audience; integrate information into the text selectively to maintain flow of ideas, avoiding plagiarism and overreliance on any one source and following a standard format for citation.

9. Draw evidence from informational texts to support analysis, reflection and research.

---

*Sue Blozzon – Oxford High School Science Chair*
How do scientist use Models?
NITARP Research Project

- NASA/IPAC Teacher Achieve Research Program
- Research collaboration with teachers around the country and NASA/IPAC Astronomers.

http://nitarp.ipac.caltech.edu/
Caltech
Research Project:

• Generate a color-magnitude diagram (CMD) for active galactic nuclei (AGN)
Research Results

**H-R Diagram for Nearby Stars**

- **Absolute Magnitude (v)** vs. **Color Index (b-v)**

**Model HR Diagram**

- **Absolute Magnitude vs. Color (0.4<z<0.5)**
  - $y = 0.9525x - 22.262$
  - $R^2 = 0.8072$

**Results - AGN Model HR**
Activity I

• Determine the types of stars present in a cluster using the HR-Diagram Model

• Activity Extension – Does the model for stars apply for galaxies
Activity II

• Develop a model for different electronic devices
• Use your model to determine an unknown voltage source

• Extension
Generate a Model

- Resistors
- Diodes
- Lightbulbs
- LEDs
