

**KIT TITLE:** Exploring Products: Nanosand

**GRADE LEVEL:** 5-12<sup>+</sup>

**OBJECTIVES:**

- The way a material behaves on the macroscale is affected by its structure on the nanoscale.
- Hydrophobic sand is coated with a nanometer-thick layer of a silicon compound, which makes it repel water

**NEXT GENERATION SCIENCE STANDARDS**

|                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
