How do engineers learn from the natural world to develop new technologies and improve our lives?
Nature is an amazing place to find design inspiration. From robotic mules to swarms of robotic bees, scientists and engineers are using the natural world as inspiration for the “wildest” new inventions.

Will the stuff of the future soon take on a life of its own?
Talking “Wilder”

- What does “wild” mean to you?
- Can you name things that you might encounter in your daily life that are wild?
- What are some examples of things that you use in your life that look or act like something found in nature?
What does “wild” mean to you?
Can you name things that you might encounter in your daily life that are wild?
What are some examples of things that you use in your life that look or act like something found in nature?
What are some examples of things that you use in your life that look or act like something found in nature?
Why do you think scientists and engineers use nature as inspiration for their research and designs?
